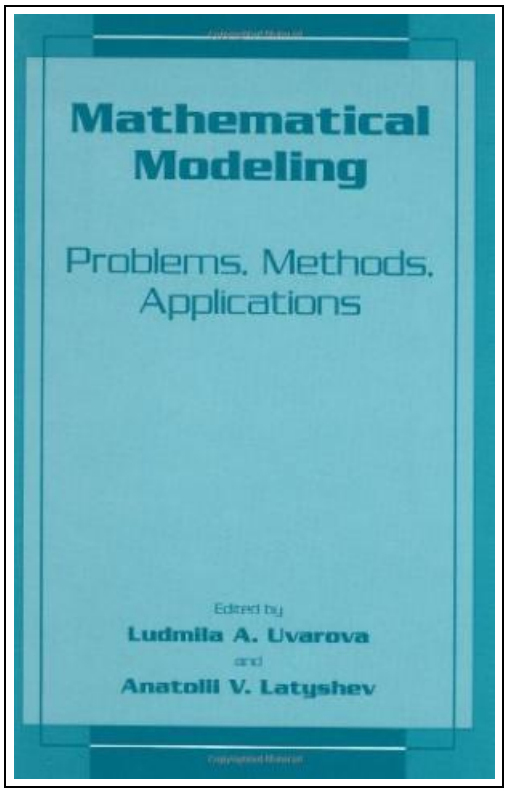
Mathematical Modeling: Problems, Methods, Applications (Hardback)



Filesize: 4.9 MB

Reviews

A must buy book if you need to adding benefit. This is for anyone who statte that there had not been a well worth reading through. Its been designed in an exceptionally straightforward way which is simply right after i finished reading this book where basically changed me, change the way i think.

(Adrien Robel)

MATHEMATICAL MODELING: PROBLEMS, METHODS, APPLICATIONS (HARDBACK)

To read **Mathematical Modeling: Problems, Methods, Applications (Hardback)** eBook, remember to click the link listed below and save the file or gain access to additional information which are in conjuction with MATHEMATICAL MODELING: PROBLEMS, METHODS, APPLICATIONS (HARDBACK) book.

Springer Science+Business Media, United States, 2001. Hardback. Book Condition: New. 2001 ed.. 259 x 171 mm. Language: English . Brand New Book. This volume contains review articles and original results obtained in various fields of modern science using mathematical simulation methods. The basis of the articles are the plenary and some section reports that were made and discussed at the Fourth International Mathematical Simulation Conference, held in Moscow on June 27 through July 1, 2000. The conference was devoted to the following scientific areas: * mathematical and computer discrete systems models; * non-linear excitation in condensed media; * complex systems evolution; * mathematical models in economics; * non-equilibrium processes kinematics; * dynamics and structure of the molecular and biomolecular systems; * mathematical transfer models in non-linear systems; * numerical simulation and algorithms; * turbulence and determined chaos; * chemical physics of polymer. This conference was supported by the Russian Ministry of Education, Russian foundation for Basic Research and Federal Program Integration . This volume contains the following sections: 1. models of non-linear phenomena in physics; 2. numerical methods and computer simulations; 3. mathematical computer models of discrete systems; 4. mathematical models in economics; 5. non-linear models in chemical physics and physical chemistry; 6. mathematical models of transport processes in complex systems. In Sections One and Five a number of fundamental and sufficiently general problems, concerning real physical and physical-chemical systems simulation, is discussed.
