

The HOS for Blind Identification and Equalization of Systems : Recent Advances in Digital Telecommunications and Signal Processing

Filesize: 1.96 MB

Reviews

This is an amazing publication i actually have at any time go through. It is actually rally interesting throgh reading through period. Its been developed in an exceptionally straightforward way which is merely following i finished reading through this publication where actually altered me, modify the way in my opinion.

(Noah Padberg)

THE HOS FOR BLIND IDENTIFICATION AND EQUALIZATION OF SYSTEMS : RECENT ADVANCES IN DIGITAL TELECOMMUNICATIONS AND SIGNAL PROCESSING

LAP Lambert Academic Publishing Dez 2016, 2016. Taschenbuch. Condition: Neu. This item is printed on demand - Print on Demand Neuware - The aim of this book is to present a theoretical development of higher order statistics (HOS) and their applications in blind identification and equalization domain. We provide a description of HOS theory, then we introduce the application of HOS to identify the transmission channels. In the one hand, we present a theoretical development linking cumulants and impulse response channels. In the other hand, these relationships are used to develop several algorithms. Finally, to assess the performance of these approaches to identify the parameters of communications channels, we consider theoretical channel models. One ends with simulation results illustrating the performance of the proposed methods. In the part of the implementation of HOS in blind equalization problem, we have checked the effectiveness of the proposed algorithm on a Multi-Carrier Code Division Multiple Access (MC-CDMA), for this we have chosen fast fading channels called BRAN. In this context, we use the equalizers techniques after channel identification to correct channel distortion. Theoretical analysis and numerical simulation results in noisy environment show that the proposed algorithm reduces the bit error rate. 80 pp. Englisch.
