Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from The Model Algebra Arranged for Elementary Schools IN presenting this work to the teachership for approval the author assumes that pupils who have been studying arithmetic for several years have acquired a somewhat thorough knowledge of numbers, terms, principles, processes, and their applications; that they will, therefore, experience little difficulty in making the transition from arithmetic to algebra; and that they can readily pass from operations and forms of reasoning involving particular numbers to similar operations and processes of reasoning involving general numbers. For these reasons, only such definitions are given as seem to be really needed to make clear the use of terms repeated or introduced. Formal rules are not given because they are of little value unless deduced by the pupil from the solution of illustrative examples and problems. It has not been deemed wise to require pupils to perform Operations with abstract symbols in accordance with arbitrary rules, except so far as such drill is necessary to prepare them for the solution of the equation, which is the main purpose of all instruction in elementary algebra. At every step suitable problems are introduced to show the practical applications of operations leading through correct processes of reasoning to accurate and definite results. The numerous examples and problems presented have been selected or made expressly for pupils of higher grammar-school grades. They are sufficiently difficult to stimulate thought, and are so graded as to insure quickness and accuracy in operations.
